

**Nurse Professional Development Day
June 12, 2023, Atlanta, GA**

Description:

The professional nursing track aims to empower TB nurse case managers in providing patient-centered care that allows for successful treatment completion. We recognize that TB nurse case management is challenging; whether brand new to TB or well-seasoned, nurses are at risk for using strategies or shortcuts that may negatively impact care. Join this dynamic session where we break down factors that can contribute to success in TB nursing case management and identify the pitfalls to avoid.

Learning objectives:

- 1) Participants will be able to define strategies necessary to successfully manage a patient from diagnosis to completion of therapy.
- 2) Participants will identify situations that could negatively impact patient care and apply best practice strategies to improve the patient experience.
- 3) Participants will learn through didactic presentation methods as well as group discussions the impact of their clinical decision making and skills that are required of TB nurse case managers to improve patient outcomes.

The Tipping Point: Successes & Pitfalls of TB Nurse Case Management
